## REACH implemented – successful registration from DyStar®

Dear valued customer,

REACH regulation was adopted by the EU in December 2006. The **transitional periods**, depending on the volume and properties of the respective chemicals, **passed by** on 31<sup>st</sup> May 2018. Now all relevant substances above 1tonne per year must be registered by EU manufacturers and importers.

**DyStar**, as a leading producer and importer of chemical products, is of course fully aware of its obligations, and **successfully registered** all its relevant substances. The EU-supply by DyStar Colours Distribution GmbH therefore can be continued in full compliance with these legal requirements. We furthermore proudly confirm that **no portfolio alignments** were carried out due to REACH-registration.

Almost all products provided by DyStar are mixtures of several substances and could not be described by one single registration. Mixtures are not directly covered by the REACH registration obligations and can not be registered as such. Registration numbers of hazardous ingredients are given in mixture safety data sheets section 3, those of non-hazardous ingredients are regarded as confidential business information.

We will of course provide more detailed information on the REACH registration status on individual chemicals of our commercial products to authorities, if there is a legal obligation.

With best regards  
DyStar Colours Distribution GmbH
